

Use of Artificial Intelligence on the website of the Network of Presidents

The purpose of this page is to explain in a transparent manner how artificial intelligence (AI) systems are used on the network-presidents.eu website.

The AI systems used by the Network are implemented in accordance with the European Regulation on Artificial Intelligence (EU AI Act) and the General Data Protection Regulation (GDPR).

1. Use of artificial intelligence on network-presidents.eu

The network-presidents.eu website uses artificial intelligence systems only for the automatic translation of documents (court judgments) retrieved through the Common Portal of Case Law.

The documents retrieved via the Common Portal are automatically translated using a neural translation system based on artificial intelligence.

The objectives of implementing automatic translation are:

- To improve access to case law of European Supreme Courts,
- To help overcome legal research limitations resulting from language barriers.

2. Warning regarding the reliability of automatic translations

It is important to note that the AI translation system used may generate errors, inaccuracies, and/or approximations. Machine translation is not a substitute for professional human translation.

The automatic translations published on this site are provided for information purposes only. AI generated translations:

- Do not constitute official translations,
- Have no legal effect.

Each page containing an automatically translated document includes an explicit reference to the use of an AI system.

3. Transparency required by the EU AI Act (Regulation (EU) 2024/1689)

In accordance with Article 50 of the EU AI Act, the Network informs users that the translations generated automatically on this website are produced by an AI system.

This content is identifiable as such by means of visible notices and, where applicable, technical metadata indicating its "AI-generated" origin.

The network-presidents.eu website does not deploy any high-risk AI systems as defined by the AI Act.

4. Data processing and compliance with the GDPR

In the context of the use of artificial intelligence, the Network strictly complies with the GDPR:

- No personal data is processed for the purpose of training or improving the AI system.
- Should a legal document contain personal data (name, address, position, etc.), this data is reproduced solely for the purposes of its legitimate publication or translation.
- No personal data is sent to third-party providers that do not comply with European regulations.

The Network follows the principles of data minimization, security and storage limitation.

5. Limitations and responsibilities

The use of artificial intelligence may introduce uncertainties. Therefore:

- The Network cannot guarantee the accuracy or total reliability of AI-generated translations.
- The Network is not responsible for the consequences resulting from AI-generated translation errors.

Translations should be considered as a reading aid, not as a reliable legal source. Any legally binding information must be confirmed via the original document in its source language.

6. Reporting an error or incorrect content

To ensure the quality of the information provided, users are invited to report:

- Translation errors,
- Inconsistent content,
- Problems related to the use of AI.

to:

- Secretariat of the Network (secretariat@networkpresidents.eu)
- Webmaster of the Network (amelie.bidarddelanoe@networkpresidents.eu)

7. Commitment to continuous improvement

The Network is committed to:

- Regular evaluation of the performance of the automatic translation system,
- Monitoring developments in the European AI legal framework,
- Enhancing the transparency and reliability of the content provided.
